Supplementary Materials

Figure S1. Growth parameters (length–weight) correlations and statistics for each group at 5 and 7.5 mpf. “CONTROL”, “MALTO”, and “PROBIO” refer to the experimental groups: control diet-fed, maltodextrin-fed, and probiotics-fed, respectively.
Figure S2. PCA analysis for computer-assisted sperm analysis (CASA) variables for control and probiotic-fed group. Representation of the experimental group in a principal component plane at (A) 5 mpf and (B) 7.5 mpf.
