Supplementary data: mRNA expression genes of ion-exchanger, glutamate/glutamine metabolism and TCA cycle in rat kidney

We used RT-PCR to screen the expression of the 11 ion-exchanger genes that contribute to the acid-base regulation in the kidney cortex, including the expression of 5 genes related to glutamine/glutamate metabolism and 3 genes that involved TCA cycle (Table 1). The results revealed that MSG-treated rats had significantly decreased expression of ion-exchanger genes, namely CAII, NBC1, and AE1, involved in the bicarbonate kidney reabsorption similar to NaHCO3. No significant differences were observed for mRNA expression levels of another ion-exchanger genes both cortex and medulla layer (Figure S1-S3). Glutamine/glutamate metabolism (Figure S4) and TCA cycle (Figure S5) gene expression in kidney were unchanged in MSG, NaCl and NaHCO3 compared to control groups.
Figure S1. Changes in mRNA expression of ion exchanger genes in the cortex (left panel) and medulla (right panel) layers of rat kidney after 14 days of MSG, NaCl and NaHCO₃ supplementation compared to controls. (A-B) AE1, (C-D) CAII, (E-F) Na⁺/K⁺-ATPase, (G-H) H⁺/K⁺-ATPase. Data are shown as mean ± SD relative gene expression with beta-actin, *p<0.05; **p<0.01; ***p<0.001.
Figure S2. Changes in mRNA expression of ion exchanger genes in the cortex (left panel) and medulla (right panel) layers of rat kidney after 14 days of MSG, NaCl and NaHCO₃ supplementation compared to controls. (A-B) CAIV, (C-D) NBC1, (E-F) NHE3, (G-H) Rhbg. Data are shown as mean ± SD relative gene expression with beta-actin, **p<0.01.
Figure S3. Changes in mRNA expression of ion exchanger genes in the cortex (left panel) and medulla (right panel) layers of rat kidney after 14 days of MSG, NaCl and NaHCO₃ supplementation compared to controls. (A-B) Rhcg, (C-D) Pendrin, (E-F) H⁺-ATPase. Data are shown as mean ± SD relative gene expression with beta-actin.
Figure S4. Changes in mRNA expression of glutamate and glutamine metabolism in the cortex (left panel) and medulla (right panel) layers of rat kidney after 14 days of MSG, NaCl and NaHCO₃ supplementation compared to controls. (A-B) EAAC1, (C-D) XC-sys, (E-F) Glutaminase, (G-H) PEPCK, (I-J) SNAT3. Data are shown as mean ± SD relative gene expression with beta-actin, *p<0.05; **p<0.01; ***p<0.001.
Figure S5. Changes in mRNA expression of TCA cycle in the cortex (left panel) and medulla (right panel) layers of rat kidney after 14 days of MSG, NaCl and NaHCO₃ supplementation compared to controls. (A-B) Citrate synthase, (C-D) Aconitase, (E-F) IDH. Data are shown as mean ± SD relative gene expression with beta-actin.
