

Supplementary Figure S1. Kaplan-Meier curve for overall survival according to smoking history in smokers and nonsmokers. The five-year survival rate was not significantly different from 78.1% for nonsmokers and 73.6% for smokers.

Supplementary Figure S2. Pretherapeutic clinical staging according to smoking history. There was no significant difference based on chi-square test.

Supplementary Figure S3. Histologically classification according to the 2005 WHO criteria based on smoking history. There was no significant difference based on chi-square test.
