Supplementary Figure S1. The role of FAK in regulating TNBC cells to CIK cell. (A) Basal FAK and PD-L1 expressions in MDA-MB-231, MDA-MB-468, IV2-1 and LC-1 cells. (B) PD-L1 expression decreased after siRNA-mediated knockdown of FAK expression in IV2-1 and LC-1 cells. (C) Knockdown of FAK in IV2-1 and LC-1 cells, followed by coculture with CIK cells increased the death of both cells. Data from three independent experiments were used for statistical analysis and *p < 0.05.
