Sup. Figure 1. The % of $^{13}$C Phe, $^{13}$C MD and $^{13}$C SA of the total amount detected in J8-1 micropropagated shoots.

Sup. Figure 2. Effect of NaCl on the shoot biomass of control, MD and Phe treated J8-1 plum seedlings. Data represents the mean ± SE of at least ten repetitions. No statistical differences were observed according to Duncan’s test ($p < 0.05$).
Sup. Figure 3. Effect of NaCl on the water content in the leaves and roots of control and MD- and Phe-treated J8-1 seedlings. Data represents the mean ± SE of at least four repetitions. Different letters indicate statistical significance according to Duncan’s test ($p < 0.05$).
