Supplementary Materials: Figure S1: HLA-I and HLA-II expression of JPCs and iMSCs.

Figure S1. HLA-I and HLA-II expression of JPCs and iMSCs of untreated samples (Co) and after stimulation with 200 ng/ml IFN-γ (Sigma-Aldrich, St. Louis, USA) for 7 days (IFN-γ). Surface marker expression was detected by flow cytometry using APC-conjugated anti-HLA-I and anti-HLA-II antibodies (Biolegend, San Diego, USA). Positive cells were gated on the basis of the corresponding isotype control samples. Differences in surface marker expression were compared using two-way ANOVA (n = 3 patients, ** = p < 0.01, *** = p < 0.001).
