

# Calcium Ionophore-Induced Extracellular Vesicles Mediate Cytoprotection against Simulated Ischemia/Reperfusion Injury in Cardiomyocyte-Derived Cell Lines by Inducing Heme Oxygenase 1

**Figure S1.** StressEV activate iNOS expression in H9c2 cells. H9c2 cells were stimulated for 6 h with stressEVs (5 or 10 µg/mL) or with LPS (10 ng/mL) in absence or presence of TAK-242 (2.5 µM). *iNos* mRNA levels were determined using qPCR. Data are pooled from three independent experiments ( $n = 5$ ; \*  $p < 0.05$  vs. control; \*\*  $p < 0.01$  vs. control).
