Supplemental Figure 1. TF-DNA complex assay validation. (A) As previously reported in the literature, MPO-DNA complexes in plasma dose-dependently increased after stimulation of the whole blood with increasing LPS dosages (0–25 μg/mL) \((n = 1)\). (B) Levels of plasma TF-DNA complexes follow a similar dose-dependent trend being induced by higher LPS concentrations \((n = 1)\). (C) Direct relationship between MPO-DNA and TF-DNA \((n = 1)\). LPS = lipopolysaccharide, MPO = myeloperoxidase, TF = tissue factor.
