Editor-in-Chief

Prof. Dr. Nicholas Dixon

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Author Benefits

-  **Open Access** Unlimited and free access for readers
-  **No Copyright Constraints** Retain copyright of your work and free use of your article
-  **Coverage by Leading Indexing Services** Science Citation Index Expanded (SCIE - Web of Science), Scopus and other databases. Citations available in PubMed, full-text archived in PubMed Central
-  **Thorough Peer-Review**
-  **Rapid Publication** First decision provided to authors approximately 13.6 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in in the second half of 2020)
-  **Discounts on Article Process Charges (APC)** If you belong to an institute that participates with the MDPI Institutional Open Access Program

Aims and Scope

Antibiotics (ISSN 2079-6382) is an open access journal, publishing original research, reviews, clinical studies and case reports, communications, and short notes.

The scope of *Antibiotics* includes, but is not limited to:

- Advances in research on new and current antibiotics and related bioactive medicinal agents
- Antibiotic administration, drug-drug interactions and pharmacodynamics
- Biochemical and genetics studies on microorganisms for improved antibiotics
- Uses of antibiotics, including in animals and agriculture
- Clinical trials
- New methods for assaying and evaluating antibiotics
- Production and characterization of antibiotics
- Classes of antibiotics
- Antibiotic resistance and misuse
- Natural antibiotics
- Epidemiology of antimicrobial use
- Antimicrobial stewardship
- Qualitative and quantitative research exploring the determinants of antimicrobial use and resistance
- Prescribing sciences
