Message from the Editor-in-Chief

Cancers is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access Unlimited and free access for readers

No Copyright Constraints Retain copyright of your work and free use of your article

Thorough Peer-Review

Rapid Processing and Immediate Publication upon Acceptance

Coverage by Leading Indexing Services SCIE-Science Citation Index Expanded (Clarivate Analytics), PubMed (NLM), Scopus (Elsevier)

No Space Constraints, No Extra Space or Color Charges No restriction on the length of the papers, number of figures or colors

Discounts on Article Processing Charges (APC) If you belong to an institute that participates with the MDPI Institutional Open Access Program (IOAP)

Aims and Scope

Cancers features (1) Original Articles reporting on novel and original findings; (2) Clinical Observations accompanied by analysis and discussion; (3) Communications reporting small scale studies that include important new information; (4) timely Reviews and Topical Issues on cutting edge fields in oncology. In addition, we accept well-designed studies showing meaningful but negative results. By doing this, we encourage scientists to share those data so that they would not need to repeat the experiments that somebody else has already done.

The scope of *Cancers* includes (but is not limited to):

- Cancer pathophysiology
- Cancer causes
- Cancer diagnosis
- Cancer screening
- Cancer prognosis
- Cancer prevention, initiation, progression, and treatment
