Nordic Autophagy Society (NAS), Signal Transduction Society (STS), Spanish Society for Biochemistry and Molecular Biology (SEBBM), Spanish Society of Hematology and Hemotherapy (SEHH) are affiliated with Cells.
Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. Cells encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

- **Open Access** Unlimited and free access for readers
- **No Copyright Constraints** Retain copyright of your work and free use of your article
- **Impact Factor 4.366** (2019 Journal Citation Reports®); 5-Year Impact Factor: 5.276 (2019)
- **Discounts on Article Processing Charges (APC)** If you belong to an institute that participates with the MDPI Institutional Open Access Program (IOAP)
- **Thorough Peer-Review**
- **Coverage by Leading Indexing Services** SCIE, PubMed (NLM), Chemical Abstracts (ACS), EMBASE (Elsevier)
- **No Space Constraints, No Extra Space or Color Charges** No restriction on the length of the papers, number of figures or colors
Aims and Scope

Cells (ISSN 2073-4409) is an international, peer-reviewed open access journal that provides an advanced forum for studies related to cell biology and physiology, molecular biology, and biophysics. We aim to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on paper length.

The scope of Cells includes:

- OMICS: transcriptomics, genomics, proteomics, metabolomics, glycomics, lipidomics, interactomics, fluxomics, biomics
- Cell structure: organelles, cytoskeleton, cell membrane, capsule, flagella, etc.
- Cell physiology: cell growth, metabolism, protein synthesis, division, movement of proteins, active/passive transport, intra- and extracellular signaling, adhesion, DNA repair, etc.
- Cell movement and motility
- Autophagy
- Apoptosis
- Cell aging
- Cell techniques: cell and tissue culture, isolation and fractionation of cells, immunocytochemistry (ICC), in situ hybridization (ISH), transfection, optogenetics
- Cell growth and differentiation
- Hematopoiesis and stem cells
- Cancer stem cells
- Genetic disorders
- CAR-T cell research
