

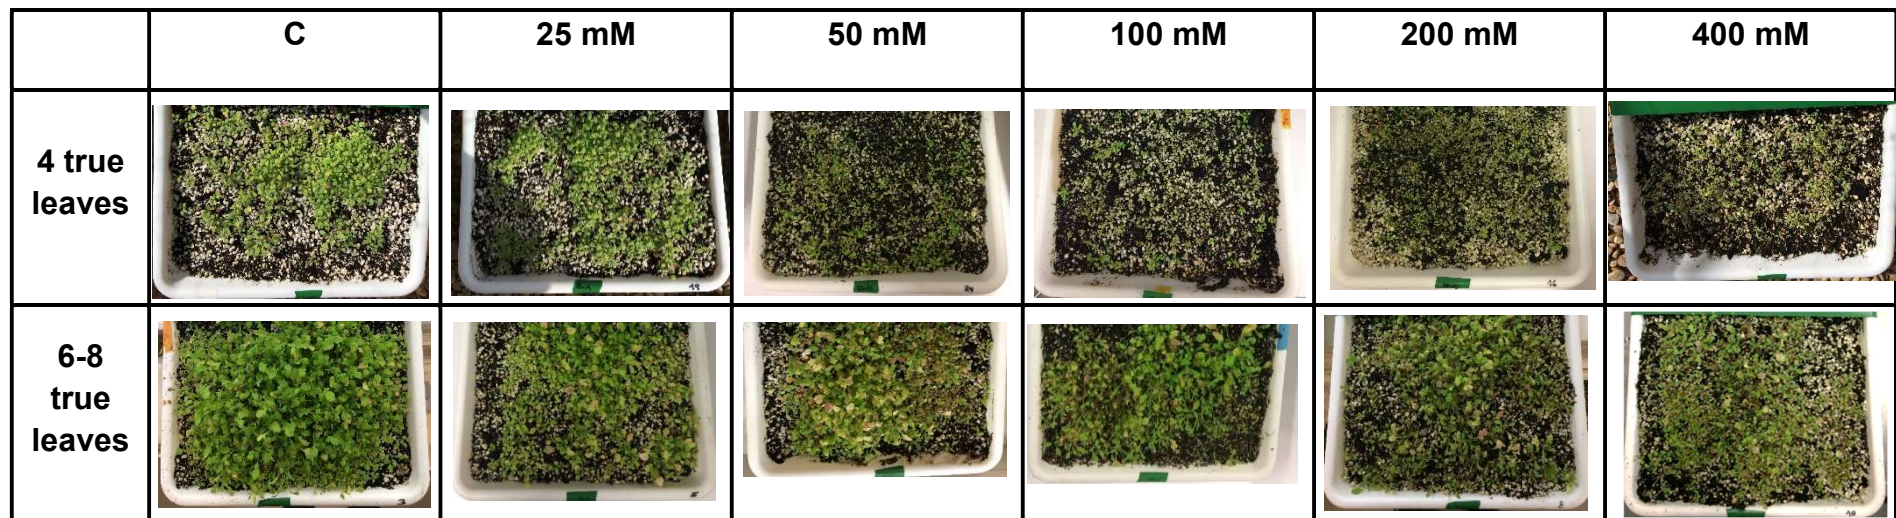

**Figure S1:** Aspect of the *Lolium rigidum* and *Sinapis alba* plants 7 and 18 days after treatment. 400 mM quinate was applied. Control plants were treated with only surfactant. The image in the box shows leaf border aspect of quinate-treated *S. alba* plants after 18 days.

**Figure S2:** Aspect of the *Papaver rhoeas* plants 18 after treatment. Quinate (25-400 mM) was applied at two different phenological stages. Control plants were treated with only surfactant.
