About the section Materials

The Section on Applied Materials encourages multidisciplinary research in the field of novel material development and innovative material applications. It spans the full range of material types, encompassing polymers, ceramics, metals and hybrid materials. The main focus is on novel developments and applications in society relevant themes. More specifically, articles dealing with the application of materials in novel electronic, optical or mechanical devices, the use of functional materials in applications related to energy and the environment and novel manufacturing techniques, such as additive manufacturing, are highly welcomed. Applied Sciences in general and this Section on Applied Materials in particular offers a high quality peer review followed by a rapid publication decision.
