Appendix 1

Response patterns as measured by diffusion weighted MRI (DWI) and FDG-PET in the individual patients. Results from DWI are presented as ADC$_{\text{mean}}$ and ADC$_{\text{median}}$ (mean and median apparent diffusion coefficient). Results from FDG-PET is presented as SUV$_{\text{max}}$ and SUV$_{\text{peak}}$ (maximum and peak standardized uptake value) together with PERCIST$_{\text{ref}}$ (SUV in a reference region in the liver measured according to the PERCIST recommendations[1]).
