**Message from the Guest Editor**

Dear Colleagues,

Precision agriculture (PA) – defined as a set of technologies that combines acquisition, analysis, management, and delivery of information to help make site-specific decisions, with the ultimate goal of optimizing production – will play an important role in addressing this grand challenge. At the heart of the evolving tools, technologies, and information management strategies found in precision agriculture is remote sensing. However, the technology of capturing, analyzing, storing, and delivering the remotely sensed observations associated with precision agriculture is changing rapidly, thus making it difficult to keep up with the ever-expanding volume of scientific research. It is time to take stock of the current state-of-the-art in the remote sensing associated with precision agriculture.

Dr. Mutlu Ozdogan

**Author Benefits**

- **Open Access:** free for readers, with publishing fees paid by authors or their institutions.
- **High visibility:** indexed by the Science Citation Index Expanded (Web of Science), Compendex (EI) and other specialized databases.
- **Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 31 days after submission; acceptance to publication is undertaken in 7 days (median values for papers published in this journal in 2016).
