Supplementary Information

**Figure S1.** Interaction of IQGAP1 with VE-cadherin and catenins, β, α and γ. (a–d) HUVEC lysates were immunoprecipitated with antibodies against IQGAP1 or IgG. Representative immunoblots from three independent experiments demonstrated that IQGAP1 associates with VE-cadherin and catenins, β, α and γ; (e–h) Confluent HUVEC monolayers were processed for immunofluorescence microscopy. Note co-localization of IQGAP1 with VE-cadherin and β-, α- and γ-catenins (Merged). Magnification bars = 10 µm.
