an Open Access Journal by MDPI

Editor-in-Chief

Assoc. Prof. Dr. Vladimir N. Uversky

Message from the Editor-in-Chief

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Author Benefits

-  **Open Access** Unlimited and free access for readers
-  **No Copyright Constraints** Retain copyright of your work and free use of your article
-  **Rapid Publication** First decision provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 7.89 days (median values for papers published in this journal in 2018)
-  **Thorough Peer-Review**
-  **Coverage by Leading Indexing Services** SCIE-Science Citation Index Expanded (Clarivate Analytics), MEDLINE (NLM), PubMed Central, EMBASE and Scopus (Elsevier), CAS - Chemical Abstracts
-  **No Space Constraints, No Extra Space or Color Charges** No restriction on the length of the papers, number of figures or colors
-  **Discounts on Article Processing Charges (APC)** If you belong to an institute that participates with the MDPI Institutional Open Access Program

Aims and Scope

Biomolecules (ISSN 2218-273X) is an international, peer-reviewed journal focusing on organic molecules and their functions, structures, systems properties, environment, and interactions with other molecules. *Biomolecules* publishes original research papers, short communications, and cutting-edge reviews.

The scope of *Biomolecules* is broad and multi-disciplinary, including:

Small molecules: lipids, sterols, carbohydrates, vitamins, hormones, neurotransmitters, metabolites

Monomers: amino acids, nucleotides

Polymers: peptides, proteins, nucleic acids, polysaccharides, lignin, glycoproteins

Diverse approaches covered: biochemical, structural, molecular, cell biology, genetic, physiological, and computational approaches
