## Aims and Scope

*Remote Sensing* (ISSN 2072-4292) publishes regular research papers, reviews, letters and communications covering all aspects of remote sensing science, from sensor design, validation/calibration, to its application in geosciences, environmental sciences, ecology and civil engineering. Our aim is to publish novel/improved methods/approaches and/or algorithms of remote sensing to benefit the community, open to everyone in need of them. There is no restriction on the length of the papers or colors used. The method/approach must be presented in detail so that the results can be reproduced. Moreover, authors are encouraged to submit their original codes/data as supplementary information for the paper.

The scope of *Remote Sensing* includes:

- Multi-spectral and hyperspectral remote sensing
- Microwave remote sensing
- Lidar and laser scanning
- Unmanned aerial vehicles
- Satellite image processing and pattern recognition
- Data fusion and data assimilation
- Remote sensing applications
