Diorganotin dihalide complexes with bidentate nitrogen ligands exhibit some pharmaceutical activities such as antitumour activity, antiviral activity and anti-microbiological activity[1-3], we have synthesized some diorganotin dihalide and dipseudohalide complexes with bidentate nitrogen ligands, one of which is (2,2'-bipyridine-N,N')dibutyldiisothiocyanotin.

\]

A solution of dibutyldiisothiocyanotin (1.40 g, 4 mmol) in benzene (20 ml) was added to a solution of 2,2'-bipyridine (0.63 g, 4 mmol) in benzene (20 ml). The mixture was refluxed for 4 h, the solid that appeared upon cooling was filtered and recrystallized from absolute ethanol to give the title compound as white crystal (1.70 g, 84%).
