Protective Effect of Resveratrol against Ischemia-Reperfusion Injury via Enhanced High Energy Compounds and eNOS-SIRT1 Expression in Type 2 Diabetic Female Rat Heart

Natacha Fourny, Carole Lan, Eric Séréé, Monique Bernard and Martine Desrois.

Figure S1. AMP (A), ADP (B) and EC*10 (C) in rat hearts. Data are expressed as means ± SEM and one-way ANOVA was used to compare the groups. No statistical difference was found between groups for AMP content. ADP content was significantly decreased only in GK versus CTRL (*p<0.05).
RSV increased ADP content but it did not reach statistical difference. No difference was found between groups for energy charge.

**Figure S2.** Protein expression of SIRT3 in rat hearts. Data are expressed as means ± SEM and one-way ANOVA was used to compare the groups. No statistical difference was found between groups.

**Figure S3.** MDA heart content in rat hearts. Data are expressed as means ± SEM and one-way ANOVA was used to compare the groups. No statistical difference was found between groups.
