Supplemental Materials

Supplemental Material for:
The effect of vitamin C (ascorbic acid) in the treatment of patients with cancer: a systematic review.
G. van Gorkom, E. Lookermans, C. van Elssen, G. Bos.
Supplemental File S1: Literature Search

Database Pubmed:
Search Strategy:
((((((((Cancer) OR Neoplasm) OR "Neoplasms"[Mesh])) AND ((((dehydroascorbic acid) OR Ascorbate) OR Vitamin C) OR ascorbic acid) OR "Dehydroascorbic Acid"[Mesh]) OR "Ascorbic Acid"[Mesh])) AND (((((((Randomized) OR RCT) OR randomized controlled trial) OR "Randomized Controlled Trials as Topic"[Mesh]) OR "Randomized Controlled Trial"[Publication Type]) OR (((Clinical trial) OR Controlled clinical trial) OR "Controlled Clinical Trials as Topic"[Mesh]) OR "Controlled Clinical Trial"[Publication Type])) OR ((Case control) OR "Case-Control Studies"[Mesh])) OR ((Prospective Study) OR "Prospective Studies"[Mesh])) OR (((cohort) OR cohort study) OR "Cohort Studies"[Mesh])) OR (((Phase 2) OR "Clinical Trial, Phase II"[Publication Type]) OR "Clinical Trials, Phase II as Topic"[Mesh])) OR (((Observational study) OR "Observational Study"[Publication Type]) OR "Observational Studies as Topic"[Mesh])) AND (((((Response rate) OR Tumor response) OR Toxicity) OR progression free survival) OR Overall survival) OR Reduced infection) OR ((Disease free survival) OR "Disease-Free Survival"[Mesh])) OR ((Quality of life) OR "Quality of Life"[Mesh])) Filter: Human, English.

Database EMBASE:
Search strategy: ((vitamin C) OR (ascorbic acid) OR ascorbate) AND (neoplasm* OR malignanc* OR cancer OR carcinoma OR leukemia OR lymphoma)
Filter: Human, English.
Supplemental File S2: Used risk of bias tools
Cochrane Collaboration’s tool for assessing risk of bias

<table>
<thead>
<tr>
<th>Bias domain</th>
<th>Source of bias</th>
<th>Support for judgment</th>
<th>Review authors’ judgment (assess as low, unclear or high risk of bias)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selection bias</td>
<td>Random sequence generation</td>
<td>Describe the method used to generate the allocation sequence in sufficient detail to allow an assessment of whether it should produce comparable groups</td>
<td>Selection bias (biased allocation to interventions) due to inadequate generation of a randomised sequence</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Allocation</td>
<td></td>
<td>Describe the method used to conceal the allocation sequence in sufficient detail to determine whether intervention allocations could have been foreseen before or during enrolment</td>
<td>Selection bias (biased allocation to interventions) due to inadequate concealment of allocations before assignment</td>
</tr>
<tr>
<td>concealment</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Performance bias</td>
<td>Blinding of participants and personnel</td>
<td>Describe all measures used, if any, to blind trial participants and researchers from knowledge of which intervention a participant received. Provide any information relating to whether the intended blinding was effective</td>
<td>Performance bias due to knowledge of the allocated interventions by participants and personnel during the study</td>
</tr>
<tr>
<td>Detection bias</td>
<td>Blinding of outcome assessment</td>
<td>Describe all measures used, if any, to blind outcome assessment from knowledge of which intervention a participant received. Provide any information relating to whether the intended blinding was effective</td>
<td>Detection bias due to knowledge of the allocated interventions by outcome assessment</td>
</tr>
<tr>
<td>Attrition bias</td>
<td>Incomplete outcome data</td>
<td>Describe the completeness of outcome data for each main outcome, including attrition and exclusions from the analysis. State whether attrition and exclusions were reported, the numbers in each intervention group (compared with total randomised participants), reasons for attrition or exclusions where reported, and any reinclusions in analyses for the review</td>
<td>Attrition bias due to amount, nature, or handling of incomplete outcome data</td>
</tr>
<tr>
<td>Reporting bias</td>
<td>Selective reporting</td>
<td>State how selective outcome reporting was examined and what was found</td>
<td>Reporting bias due to selective outcome reporting</td>
</tr>
<tr>
<td>Other bias</td>
<td>Anything else, ideally prespecified</td>
<td>State any important concerns about bias not covered in the other domains in the tool</td>
<td>Bias due to problems not covered elsewhere</td>
</tr>
<tr>
<td>Domain</td>
<td>Explanation</td>
<td></td>
<td></td>
</tr>
<tr>
<td>--------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Pre-intervention</strong></td>
<td><strong>Risk of bias assessment is mainly distinct from assessments of randomised trials</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bias due to confounding</td>
<td>Baseline confounding occurs when one or more prognostic variables (factors that predict the outcome of interest) also predicts the intervention received at baseline. ROBINS-I can also address time-varying confounding, which occurs when individuals switch between the interventions being compared and when post-baseline prognostic factors affect the intervention received after baseline.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bias in selection of participants into the study</td>
<td>When exclusion of some eligible participants, or the initial follow-up time of some participants, or some outcome events is related to both intervention and outcome, there will be an association between interventions and outcome even if the effects of the interventions are identical. This form of selection bias is distinct from confounding—A specific example is bias due to the inclusion of prevalent users, rather than new users, of an intervention.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>At intervention</strong></td>
<td><strong>Risk of bias assessment is mainly distinct from assessments of randomised trials</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bias in classification of interventions</td>
<td>Bias introduced by either differential or non-differential misclassification of intervention status. Non-differential misclassification is unrelated to the outcome and will usually bias the estimated effect of intervention towards the null. Differential misclassification occurs when misclassification of intervention status is related to the outcome or the risk of the outcome, and is likely to lead to bias.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Post-intervention</strong></td>
<td><strong>Risk of bias assessment has substantial overlap with assessments of randomised trials</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bias due to deviations from intended interventions</td>
<td>Bias that arises when there are systematic differences between experimental intervention and comparator groups in the care provided, which represent a deviation from the intended intervention(s). Assessment of bias in this domain will depend on the type of effect of interest (either the effect of assignment to intervention or the effect of starting and adhering to intervention).</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bias due to missing data</td>
<td>Bias that arises when later follow-up is missing for individuals initially included and followed (such as differential loss to follow-up that is affected by prognostic factors); bias due to exclusion of individuals with missing information about intervention status or other variables such as confounders.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bias in measurement of outcomes</td>
<td>Bias introduced by either differential or non-differential errors in measurement of outcome data. Such bias can arise when outcome assessors are aware of intervention status, if different methods are used to assess outcomes in different intervention groups, or if measurement errors are related to intervention status or effects.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Bias in selection of the reported result</td>
<td>Selective reporting of results in a way that depends on the findings and prevents the estimate from being included in a meta-analysis (or other synthesis).</td>
<td></td>
<td></td>
</tr>

Effective Public Health Practice Project (EPHPP) Quality Assessment Tool for Quantitative Studies

Component ratings

A. Selection bias

1. Are the individuals selected to participate in the study likely to be representative of the target population?
   a. Very likely
   b. Somewhat likely
   c. Not likely
   d. Can’t tell

2. What percentage of selected individuals agreed to participate?
   a. 80-100% agreement
   b. 60-79% agreement
   c. less than 60% agreement
   d. Not applicable
   e. Can’t tell

B. Study Design

Indicate study design

1. Randomized controlled trial
2. Controlled clinical trial
3. Cohort analytic (two group pre + post)
4. Case-control
5. Cohort (one group pre + post (before and after))
6. Interrupted time series
7. Other specify...
8. Can’t tell

Was the study describes as randomized? If No go to component C.
If Yes, was the method of randomisation described?
If Yes, was the method appropriate?

C. Confounders

1. Were there important differences between groups prior to intervention?
   a. Yes
   b. No
   c. Can’t tell

2. If yes, indicate the percentage of relevant confounders that were controlled
   a. 80-100% (most)
   b. 60-79% (some)
   c. Less than 60% (few or none)
   d. Can’t tell

D. Blinding

1. Was (were) the outcome assessor(s) aware of the intervention or exposure status of participants?
   a. Yes
   b. No
   c. Can’t tell

2. Were the study participants aware of the research question?
   a. Yes
   b. No
   c. Can’t tell

E. Data collection methods

1. Were data collection tools shown to be valid?
a. Yes
b. No
c. Can’t tell
2. Were data collection tools shown to be reliable?
   a. Yes
   b. No
   c. Can’t tell
F. Withdrawals and drop-outs
   1. Were withdrawals and drop-outs reported in terms of numbers and/or reasons per group?
      a. Yes
      b. No
      c. Can’t tell
d. Not applicable
   2. Indicate the percentage of participants completing the study.
      a. 80-100%
      b. 60-79%
      c. less than 60%
      d. Can’t tell
e. Not applicable
Supplemental File S3: Risk of bias summary

| Itemized judgments for risk of bias item for each individual included RCT (+: low risk of bias; ?: unclear risk of bias; -: high risk of bias). |
|---|---|---|---|---|---|---|
| Random sequence generation (selection bias) | Allocation concealment (selection bias) | Blinding of participants and personnel (performance bias) | Blinding of outcome assessment (detection bias) | Incomplete outcome data (attrition bias) | Selective reporting (reporting bias) | Other bias |
| Creagan 1979 | ? | ? | + | + | + | + |
| Ma 2014 | ? | ? | + | + | ? | + |
| Moertel 1965 | ? | ? | + | + | ? | + |
| Zhao 2017 | ? | ? | + | + | + | + |
